

# THE OUTCROP.

Devoted to the Mining and Development of the Windermere and Golden Divisions of the District of North East Kootenay.

Year VII., No. 15.

Wilmer, B. C., Thursday, September 13, 1906.

\$2.00 Per Year.

## SCIENTIFIC RANCHING

**Blasting Powder Supplied at \$5.25 a Case at Victoria**

The recent visit of Prof. F. T. Shutt, chemist of the Central Experimental Farm at Ottawa, and Mr. J. R. Anderson, Provincial Deputy Minister of Agriculture, resulted in much good to the ranchers all through the valley.

It was the intention of The Outcrop to print their lectures here in full, but as our reporter was absent from town for some days after this became impossible. However, even at this late date a short reference may be of some interest.

Mr. Anderson had been here two years previous and took that as a reason for not making any lengthy address. He spoke briefly on the good work of the Farmers' Institutes and asked that all interested supply him with their names and addresses and he would supply them with the literature published under the Institute instructions. He drew attention to the fact that powder for blasting could now be obtained at Victoria and Nanaimo at \$5.25 a case, if 6,000 pounds were taken, that is at carload lot prices, and could be brought to any G. P. R. point at single first-class rates.

Prof. Shutt's admirable address was couched in simple and very easily understood language, translating, kindergarten fashion, the latest scientific conclusions as applied to the best system of fruit, grain and vegetable production. The speaker was eminently practical in his suggestions and carried on his lecture in a most informal and conversational way that was evidently greatly appreciated by all who were present. After expressing the pleasure he experienced in being in the Columbia Valley for the first time, the Professor explained that while he was here to give any information in his power, he was here more to learn than to teach. He desired to understand conditions out here at first hand so as to be able to go into matters referred to him in the east from there. He then in a conversational way discussed "Sources of Fertility in Fruit and Vegetable Culture, Other than Soil," dealing chiefly with climate and water. In his opinion, a lot of the professor invariably spoke with professional carelessness and with almost minute excursions into all his deliverances, there was a great future for vegetable and fruit culture in the Kootenays, especially for several species of apples, pears, plums and cherries. The government desired to help as much as possible and valuable assistance could be given, but all the problems could not be worked out at once. Temperature and rain fall were two most important factors and the speaker proceeded to show this, illustrating his remarks by a table every day applications, adding that while it was easy to obtain data, it was by no means easy to properly interpret data so obtained. Irrigation was a rule necessary at times and under existing conditions here, it would not be safe to go on regardless of it. One thing at least should be strictly looked after and that was making the soil retain moisture by cultivation and by mulching.

Prof. Shutt devoted for some time on soil fertility with the making of soil, clay, sand and vegetable matter, the speaker said there had been a steady improvement due to scientific research in the methods used to supply deficiencies. Many facts had been ascertained but much was still left to conjecture. Many soils contained the ingredients of plant food, but in insoluble state, and

so useless for practical purposes. This insoluble plant food was made soluble by science. The speaker explained the advantages to be gained by irrigation, but warned his hearers that excessive irrigation did more harm than good. High long run, washing out and away the rich ingredients. Every effort should be made to conserve the moisture by cultivation. The growing of hay and grain in the orchard was condemned, because it absorbed the moisture. The advantages to be derived from mulching were explained, and then the professor went at length into the question of the use of fertilizers, explaining the application in detail of the various kinds.

## DISTRICT CROPPINGS

**And Other Items of Interest in a General Way**

It is stated that twice the number of miners and lumbermen employed last winter will be at work in this camp the coming season.

Wild strawberries are again in season, being the third or fourth crop this year. Last week some of the Wilmer children picked quite a few right in town. Who will say this is not a fruit country?

The steamer Ptarmigan made a special trip up the river this week with a cargo of freight for different points and a few passengers, arriving yesterday and starting down again immediately on discharging her load.

Mrs. Bell and Harkness have been roaming about in different parts of the valley the past ten days evidently in search of land. Both gentlemen are direct from England, but Mr. Bell's home is in Australia.

Mr. and Mrs. Gleason, accompanied by a young man, arrived at Windermere last week and are now sight-seeing up Horse Thief creek. They are American tourists and have a great variety of splendid photos which Mr. Gleason has taken on his travels.

Major Cumberland got away on his hunt Tuesday, accompanied by Jack Horst and T. C. Conner. They went over the first Rock Mountain summit by the Sinclair Springs pass and will hunt along the upper Kootenay river and the Palliser river until the middle of October.

Those of our ranchers who intend to part with a portion of their property will find it to their own advantage to sell to men who will work the land and make good neighbors. In other words: Beware of the speculator! Seek buyers who will make good citizens and who will help build up the valley.

Lawrence Miller returned to Wilmer on the Ptarmigan Saturday, after visiting his home in Nova Scotia, where he went early last spring. En route here he spent a couple of months in Manitoba. Though offered good inducements to stay at his eastern home, he says he refused as he knew he could not be content to live in the east permanently. He has learned to love the free west.

F. F. Snook took a load of lumber out to his No. 3 creek ranch last week, this being the first heavy load to go over the new road. He pronounces it a good road so far as it is completed, and estimates that one man could in a month pick off the stones and make a fair road to the end of it; of course, he does not figure in the bridge with this estimate.

## IMPORTANT STRIKE

**Nettie M. Mine Ledge Showing Stronger and Better Than Ever**

Word was brought down from the Nettie M. mine, situated on Toby creek, that a new and important strike had been made by Mr. Washburn. The particulars obtained so far are very meagre, but it is learned the strike is in the new tunnel started some weeks ago and that the ledge and pay-ore has been shown up bigger and better than ever. The information previous to this latest strike was that the ledge in the new tunnel was four feet wide and the ore over fifteen inches in width, giving a depth considerably over 50 feet. As the ore is of very high grade the importance of the strike may be judged. Mr. Starke, one of the owners, will visit the mine next Monday and on his return further particulars may be obtained.

## BIG TOBACCO PLANTS

**Marvellous Growth in Columbia Valley--An Average Plant is Five Feet High**

Wm. Colmert has sent The Outcrop the largest tobacco plant we have ever seen, and it is now on view at this office. The plant measures a little over five feet in height, yet Mr. Thos. Martin and several other gentlemen affirm that it is only an average plant of those grown by Mr. Colmert, and that he has several fully two feet higher than this plant. One leaf on the plant measures two feet nine inches in length and is over fifteen inches in width. Mr. Colmert's ranch is situated about four miles from Wilmer, south of Horse Thief creek. He has had experience in tobacco growing in Germany and has successfully experimented with it here for several years past, and has no hesitation in asserting that with ordinary care it can be produced on a large scale and with good profit. Others in this valley have also grown the plant with fair success, but Mr. Colmert's previous experience has enabled him to far surpass the attempts of his neighbors.

In the provinces of Ontario and Quebec, where tobacco is grown on a commercial scale, the average height of the plant is said to be only about two feet, and, therefore, it is to be expected that there is a great future for the tobacco plant in this valley.

So far no one has offered an opinion on the quality of the leaves of this home-grown tobacco, and for this reason The Outcrop has determined to send a leaf to Prof. Shutt, chemist at the Central Experimental Farm of Ottawa, and another to the McDonald company of Montreal, to obtain expert opinion of its quality and commercial value. It may be pointed out that in many respects the Columbia valley is very similar to the Okanagan valley, and that the McDonald company's experts last year announced that they failed to detect any difference between the finest Havana leaf and the Okanagan leaf.

The plant will be kept on exhibition at this office for sometime and those interested are invited to call and see the marvellous growth of the tobacco plant in this Valley.

The wise man will now buy spuds.

Everybody goes to Brewer's tomorrow that is settled.

Mr. Gilchrist of Nelson arrived on the Ptarmigan yesterday.

R. A. Klumpson, proprietor of the stage line, complains that the main trunk road is badly in need of repair.

Manager R. B. Bruce took Prof. and Mrs. Adams and some other friends up to the Paradise mine Sunday to see the mine and scenery.

H. G. Parson, Golden's popular merchant, arrived on the Ptarmigan yesterday and will remain over until Sunday looking after his business interests.

Miss Snook, who has been visiting her brother in Wilmer for the past two years, intends leaving for her home in Toronto, N.S., by the next boat. Her health has greatly improved since coming here, and while her friends regret her departure they hope the good this climate has done for her may be lasting.

Our friends--everybody's friends--Mr. and Mrs. Brewer came down from Fairmont Springs Saturday and spent the night in Wilmer, cheering up their numerous friends. Asked if he expected a big turn out to the dance Friday night Mr. Brewer replied: "Yes, we expect a big crowd that night. At least every person we have met said they would be there. Of course, they may be fooling us, I can't tell. But I do know that the following week I am coming down the valley with a shot gun and a knife to look for all those who are not there. This will be the last dance at Brewer's and we hope our friends will all come. We have left the partitions out on the second floor and will have plenty of room for dancing. I have secured all the musicians in the valley for the occasion and if they get tired, why Hopcan play the mouth organ and I the violin a little and besides we have an organ and a piano-harp. There will be plenty of music. I am sure I don't know how long the dance will last. The longer it lasts the better it will please us. They may dance until Sunday if they wish or they can keep it up for a week. But let 'er go!" Mrs. Brewer is looking forward to the event with a keenness quite equal to Mr. Brewer and it is safe to say these light-hearted pioneer settlers will be dancing when the last number on the program is called.

A late report from Boston states that stockholders of the Granby Consolidated Mining, Smelting & Power Co. will receive with their September dividend checks notice of the company's annual meeting to be held in New York on Oct. 2. The company's fiscal year ended June 30, and during that period the net earnings were between \$1,800,000 and \$1,900,000. Copper production was just under 25,000,000 pounds. At present the company is treating about 1,800 tons daily, but around Nov. 1, with the completion of new furnace equipment, this amount will be increased to over 3,000 tons daily. Next year's production is expected to show a still further material increase, and a director is of the opinion that the production will be eventually increased to considerably over the 50,000,000 pounds mark. The shares of the company are now in the hands of between 2,500 and 3,000 persons, as compared with about 900 in December, 1903, the time of the first dividend payment. —Phoenix Flower.

Lowery's Claim is dead and under the "wings of the angels", in the last issue the Colonel in part says: "With this issue Lowery's Claim is the second time deposited in the tomb from which it may never rise. This journal has lived too soon to be generally popular. Perhaps it is a mistake to hand out mental breakfast when gruel can only be digested. With these few remarks the shroud is folded over a journal that perhaps has been too intensely human. Some will look upon its death as a blow to freedom, while others will find sweet music in the dropping of the clouds upon its coffin. Let it rest in peace for over its ashes I intend to build a literature that will reduce the cheek with laughter and soothe man from the temples of error by handing him Truth coated with Love much the same as we swallow quinine encased in a jacket of sugar. This haunting bitter truth in its dulcine is too much like fasting the crowd at a bunybrook fair. I might tempt the crowd, but what I might be going home on a stretcher." Col. R. T. Lowery has probably started and buried more newspapers than any other man in Canada and yet has always kept clear of the sheriff. He is a clever writer, but his "advanced ideas" and his fondness for "roasting" people has kept him from rising in the financial world, yet many of his writings will live long years after he has departed from this world.

## BRISCO NEWSLETS

(From Our Own Correspondent.)

New potatoes are now old.

Green tomatoes are now ripe.

Fall plowing has commenced.

The autumn leaves are falling.

Farmers have commenced putting up slough hay.

The Columbia river at this point rose about two feet last Saturday.

Mrs. Berry, who has been very ill all summer, is improving in health.

There are more potatoes, and good ones too, grown around Brisco than in any section of the Columbia Valley.

Miss Sharpe, who is making the Galena school second to none in the province, spent Labor day visiting her many Brisco friends.

Ernest Cobb has taken up land adjoining Daniel Campbell's excellent farm. Material is being placed on the ground for a residence, outbuildings, etc.

C. T. Top, the model farm rancher, has men at work building a handsome residence. He is also digging a large rock cellar to hold his many tons of different roots.

Since September 1 heavy cannonading has been heard on the sloughs and kopjes surrounding Brisco. It is the tourist artillery examining the game that made Brisco famous as a sportsman's elysium.

All that is needed to make the Columbia Valley known as one of the most productive spots in British Columbia is transportation. We raise the goods here, but owing to lack of facilities for transporting, cannot compete with the world.

A grand concert will shortly be pulled off in aid of the libraries of the Brisco and Galena schools. The program will consist of readings, recitations, music and instrumental music, while on the gramophone will be heard some 60 of the latest records.

Miss L. Mackinnon of Vancouver is now in charge of the Brisco school. Miss Mackinnon has been very successful as a teacher in the Okanagan and the Silvery Slopes, and the trustees are to be congratulated upon securing an able instructor for Brisco second school term.

In Vancouver a mining man is mining; but right here in Brisco mining men are mining. This week Messrs. Thorpe and Logan took to the hills to do development work on their silver-lead properties. It is stated that these gentlemen have a proposition that will soon be doing business with the squatters.

Quite a number of the farmers in this neck of the woods have elapsed a lot of their potatoes. The price secured was 13 cents a pound. While Australia, New Zealand and other countries are short on spuds, the widespread Brisco farmers are long. The price of potatoes promises to reach a high mark in the spring.

Sandon is to have another newspaper, although three or four papers have died already in the Silver City, and each one died a natural death, i.e., the editors got hawky.

W. F. EVANS, Publisher and Proprietor.

WILMER, B.C., THURSDAY, SEPT. 13, 1906.

Every little while some pioneer rancher is heard to say: "I have too much land. More than I can properly and profitably handle, and I think I had better dispose of part of my property." This conclusion seems to have become pretty general among our ranchers; especially those who have had the most experience in this valley.

It is pointed out by these men that it does not pay to employ help to any great extent at the present high rate of wages obtaining in this country, and often it is impossible to employ men at any price. There are a few who would ask that the wages of farm-hands be reduced, but the majority are aware that if wages are reduced so must the prices of their produce be reduced; and, therefore, are of the opinion that it will be better to divide their land, retaining only what they can profitably cultivate themselves or with very little hired help.

This line of argument certainly has the ring of good, sound sense and it seems that in time it will prevail to the mutual advantage of the rancher and the valley generally.

The Upper Columbia and Kootenay Valley is essentially a "Garden Valley", and the day of big stock raising is fast passing.

A small piece of land well and thoroughly worked will yield the property holder better return than a large tract scantily cultivated. This truth has been proved many times and is not disputed. Nevertheless, it is pointed out that the land in this valley should never be divided into as small farms as has been done in the Okanagan; where 10-acre farms are the rule, and where the mistake is now admitted. There is room for a good deal of argument as to just the proper sized farm for one man to undertake to work, but this can only be determined by a careful consideration of the different localities; the possibilities of irrigation being one of the main points—if not the main point—to be considered.

One man, who claims to have carefully considered the subject, gives it as his opinion that each man should have about 100 acres of land, and he would divide it in this way: 10 acres for fruit land, 10 for garden, 5 for poultry, 35 for pasture and 40 acres for hay and grain. The advantage of some such division as this ensures the farmer against an entire failure each and every year. For instance, if his orchard should fail to give him an average crop one year, his garden would be almost certain to make up for that loss. Then, too, he could keep a few cows and horses and raise hay and grain for them, and also grain for his poultry.

To divide a large tract of land this way would require careful surveying, but in most cases it could be done to advantage, as it would allow each farm some bottom land for garden, side hill for orchard, bench land for hay and grain, and rolling land for pasture.

Such a scheme would mean increased population, well-to-do farmers and few millionaires for this Valley.

H. G. Wells, the imaginative yet profound English writer, has a formidable indictment of American civilization in a recent number of Harper's Weekly. He says: "Just think of it: The richest, greatest country the world has ever seen has over 1,700,000 children under fifteen years of age toiling in fields, factories, mines and workshops. . . In the South there are now six times as many children at work as there were twenty years ago. Child labor is increasing yearly in that section of the country. . . This is the bottom end of the scale that at the top has all the lavish spending of Fifth avenue, and the joyous, wanton giving of Andrew Carnegie. . . These working children cannot be learning to read—though they will presently be having votes—they cannot grow up fit to bear arms, to be in any sense but a vile computing sweater's sense, men. So, miserably, they will avenger themselves by applying the staff for vice, for crime, for yet more criminal and corrupt political manipulations."

Can it be that the Coast newspapers are jealous of the magnificent scenery of the Upper Columbia Valley? They know it is here, yet they seldom mention the fact. But the day is not far distant when these newspapers will be clamoring for news and cuts of this valley.

The London Telegraph, remarking on the sparsity of Englishmen regarding Canada, says: "We fear we must plead guilty to the indictment. Englishmen, possibly owing to their insular position, are apt to be self-conceited."

Canada's revenue keeps climbing. The month of August shows an increase of \$402,906 over the same time last year. The revenue for the month was \$4,615,951. For the two months of the fiscal year the revenue was \$6,176,330, an increase of \$764,230.

"There are a lot of papers that are anouncing themselves these days by roasting 'Old Man Simpson.' And yet the 'Old Man' never slept better," says the Cranbrook Herald. This is serving the "Old Man" right. Just so long as he continues to print the best paper in B. C. he may expect to be roasted.

Under the provisions of an act passed by the Dominion Parliament last session to ask a higher rate than 12 per cent per annum on loans of less than \$500 is a statutory offence. A magistrate be fore whom a person is brought who has exacted a larger rate than 12 per cent, may reduce the charge to the legal limit. This is a wise and humane law and would be still more effective if it carried with it the penalty of confiscation in extreme cases.—Vancouver World.

To the man who lives in British Columbia there is no place like this province. The longer that a man lives in the province, the more loyal he grows. It is in the air, in the climate, in everything that he breathes and eats. Take the man who has lived in British Columbia for a few years. Could you get him to go back to his eastern home? Yes, for a visit, but not to live permanently. Once a citizen of British Columbia, always a citizen. The best boosters this province has are those who have lived here for a number of years.—Cranbrook Herald.

The world bestows its big prizes in money and in honors for but one thing—initiative. What is initiative? It consists in doing the right thing without being told. The next best thing to doing the right thing without being told, is to do it when you are told once. Some people never do a thing until they are told twice; such get no honors and small pay. Then there are those who do the right thing only when necessity kicks them from behind. This class spends most of its time polishing benches with hardback stoves. Still, lower down in the scale is the fellow who will not do the right thing even when some one goes along to show him how, and stays to see he does it; he is always out of a job, and receives only the contempt he deserves, unless he has a rich pa, in which case destiny waits patiently around the corner with a stuffed club.—Elbert Hubbard.

If you see him, lean and lonesome,  
Loading and around town,  
Nervous, filgety and moansome,  
Acting like a silly clown,  
If you hear him sigh and mention  
That each moment seems a day—  
Let us call to your attention  
That the poor man's wife's away.—Ex.
